CoffeeMUD Management Console (1.6.0)

Allows you to manage your CoffeeMUD server with a text based GUI -
Official support sites: [Official Github Repo](#) - [Official Forum](#)

Edit "cmc" and change the settings at the top if your CoffeeMUD server is not in /home/cmowner/CoffeeMud.

You will need to run cpan (as root) and install these modules:

- cpan -i UI::Dialog
- cpan -i Term::ReadKey
- cpan -i Term::ANSIScreen

You also need to have my CoffeeMUD Startup Script installed.

I suggest you then add this to your /home/cmowner/.bashrc file:
export PATH=/home/cmowner/bin:/home/cmowner/CoffeeManagementConsole:$PATH

After that you should log out and back in and now "cmc" should work.
